

**BEST
RESIDENTIAL
UPGRADE**

ComPeri GmbH ChaletB

Switzerland

The elegance of ComPeri's work for this residential upgrade at ChaletB wowed the judges from start to finish, making it the very worthy winner of this hotly contested category.

Nestled in the luxurious alpine resort of St. Moritz, in Switzerland's Engadin valley, ChaletB follows suit with its sleek, yet cosy Swiss interior, along with spectacular views looking out across the crisp white alps.

German integrator ComPeri GmbH was asked to design a simple and discreet user interface to blend seamlessly within the natural style dwelling. Going back to basics and using the shell of the property, they created something out of this world.

Enlisting Crestron technology to make it reality, ComPeri GmbH worked alongside the local carpenter to install the technology within the floors and ceilings of the property, to ensure it was as unobtrusive as possible. The technology is seamlessly integrated: speakers are invisible, and televisions are hidden within the ceilings, out of sight until in use. This clever design does not interfere with the beautifully designed interiors, nor affect the exceptional acoustics within the rooms.

With such a large property, set in its remote location, the simplicity and ease of using Crestron touch screens is endless. The owner has full control at his fingertips of all areas inside and outside the home from the comfort of his own sofa. The control of the heated driveway, automated swimming pool, temperature of the sauna, hammam and wine room are all easily accessible, allowing for the ultimate in relaxed living in its tranquil surroundings.

The control of the AV, lighting, security and HVAC is also seamless and easily accessible with one touch. Using a series of Crestron TSW-1060 touch screens and iPad minis, which have been integrated with Apple music, the homeowner can create the perfect scene for entertaining guests, watching a movie or simply relaxing in the comfort of his own home.
